● NATURE OF TECHNOLOGICAL HAZARDS (S. Chp.13)

- “Man-Made” Accidents *c.f.* ‘Social’ Hazards => Deliberately harmful use of technology
- Definition of Technological Hazards: *Accidental failures of design or management relating to large-scale structures, transport systems or industrial processes that may cause the loss of life, injury, property or environmental damage on a community scale.*
- Technological Accidents: Structures (Fire & Collapse), Public Transport, Industry
- Arising Factors of Technological Hazards:
Defective Design, Inadequate Management, Sabotage or Terrorism.
- Transportation of Hazardous Material: PRTR (Pollutant Release and Transfer Register)
- NIMBY => Safety Distance (?) => Buffer Zone, Landuse Planning

● MAJOR TECHNOLOGICAL DISASTERS

- Bhopal Disaster: Bhopal India
 - ⇒ Dec. 03, 1984; official record: 3,800 deaths; general belief: 6,400 deaths
 - ⇒ Methyl isocyanate (MIC 異氰酸甲酯) => Phosgene (光氣)
 - ⇒ Emergency Planning and Community Right-to-Know Act
 - ⇒ Emerging Technology, Emerging Chemicals => Emerging Pollutants
- Chernobyl Disaster: Chernobyl (the former Ukrainian Republic of the Soviet Union)
 - ⇒ Apr. 26, 1986; official record: 30 deaths (28 from radiation)
 - ⇒ Nuclear Power Plant: RBMK light water graphite reactor (石墨沸水管反應器)
- Exxon Valdez Oil Spill: Alaska’s Prince William Sound
 - ⇒ Mar. 24, 1989; spilled almost 11 million gallons of crude oil (total 53 million gallons)
 - ⇒ 阿瑪斯號貨輪油污事件（2001 年 1 月 14 日）：墾丁國家公園龍坑生態保護區
- Fukushima Nuclear Disaster (http://www.world-nuclear.org/info/fukushima_accident_inf129.html):
 - ⇒ Following a major earthquake, a 15-metre tsunami disabled the power supply and cooling of three Fukushima Daiichi reactors, causing a nuclear accident on 11 March 2011.
 - ⇒ The accident was rated 7 on the INES scale, due to high radioactive releases in the first few days. Four reactors are written off - 2719 MWe net.

● CONTEXT HAZARDS

- Context Hazards: 『蝴蝶效應』災害、『漸進型』、『廣泛型』、『糾雜型』…

- Global environmental change can be regarded as an environmental hazard.
- Chronic ('elusive') hazards and Rare ('new') hazards
- The El Niño Southern Oscillation (ENSO)
 - ⇒ Disasters associated with El Niño: floods, droughts, wildfires and diseases
- The North Atlantic Oscillation (NAO) and The Thermohaline Ocean Circulation
- Global Warming: Water resource, diseases, sea-level rise
- Transboundary Air Pollution => Fine Particulate Matters (PM_{2.5})
- Asteroid and Comet Impact (Rare Hazards)

博帕爾事件（維基百科）

博帕爾事件發生於1984年12月3日凌晨，印度中央邦的博帕爾市(Bhopal)美國聯合碳化物(Union Carbide)屬下的聯合碳化物（印度）有限公司（UCIL），設於博帕爾貧民區附近一所農藥廠發生氰化物洩漏事件。當時有二千多名博帕爾貧民區居民即時喪命，後來更有兩萬人死於這次災難，二十多萬博帕爾居民因而永久殘廢，現時當時居民的患癌率及兒童夭折率，仍然因這些災難遠比其他印度城市為高。

由於這次大災難，世界各國化學集團改變了拒絕與社區通報的態度，亦加強了安全措施。但亦因這事件，很多環保人士以及民眾，都反對將化工廠設於鄰近民居的地點。新化工廠的設置，都會引發民眾的抗爭。

而美國聯合碳化物集團，經過在美國和印度多番訴訟，亦因這次慘劇要向印度政府賠償四億七千美元，亦要出售該集團持有的聯合碳化物（印度）有限公司百分之五十股權，用以興建治療受影響居民的醫院和研究中心。不久，美國聯合碳化物集團本身亦被人狙擊，雖然狙擊失敗，但董事局仍將美國聯合碳化物分拆成若干公司，包括永備電池集團（Energizer）。而美國聯合碳化物集團在2001年2月，成為美國陶氏化工（Dow）集團的全資附屬公司。
